

Powerdown220 Eliminating Electricity Overspend In The Forging & Smelting Industry

Powerdown220 are working alongside some of the major forging & smelting companies eliminating their electricity overspend saving them hundreds of thousands £££ every year by implementing Voltage Optimisation (VO) solutions on a site, head office and distribution level.

Forging & Smelting Case Study

- **Annual Electricity Spend: £146,000**
- **Annual Energy Savings: £21,278**
- **Project Cost: £28,156**
- **Payback Time: 15.6 Months**
- **ROI: 75.57%**

In addition to saving forging & smelting companies hundreds of thousands £££ every year in eliminating electricity overspend, our VO technology also increases the lifespan of all their electrical equipment and appliances.

Reducing incoming voltage also reduces harmful carbon emissions improving the carbon footprint of every forging & smelting company.
