## Powerdown220 Eliminating Electricity Overspend In High Tech Manufacturing & Precision Engineering

Powerdown220 are working alongside some of the major high tech manufacturers & precision engineers, eliminating their electricity overspend saving them hundreds of thousands £££ every year by implementing Voltage Optimisation (VO) solutions on a site, head office and distribution level.

### Precision Engineering Case Study

- Annual Electricity Spend: £86,820.00
- Annual Energy Savings: £8,401.40
- Project Cost: £12,859.48
- Energy Reduction: £9.68%
- Harmful Emissions Reduction: 24,085 KG
- Payback Time: 18 Months
- 10 Year Savings: £102,720.31
- ROI: 65.3%

In addition to saving high tech manufacturers and precision engineers hundreds of thousands £££ every year in eliminating electricity overspend, our VO technology also increases the lifespan of all their electrical equipment and appliances. Reducing incoming voltage also reduces harmful carbon emissions improving the carbon footprint of every precision engineering company.
